**START NOW**

# The only food API you'll ever need.

Our knowledge engineers spent years crafting our **complex food ontology**, which allows us to understand the relationships between ingredients, recipes, nutrition, allergens, and more.

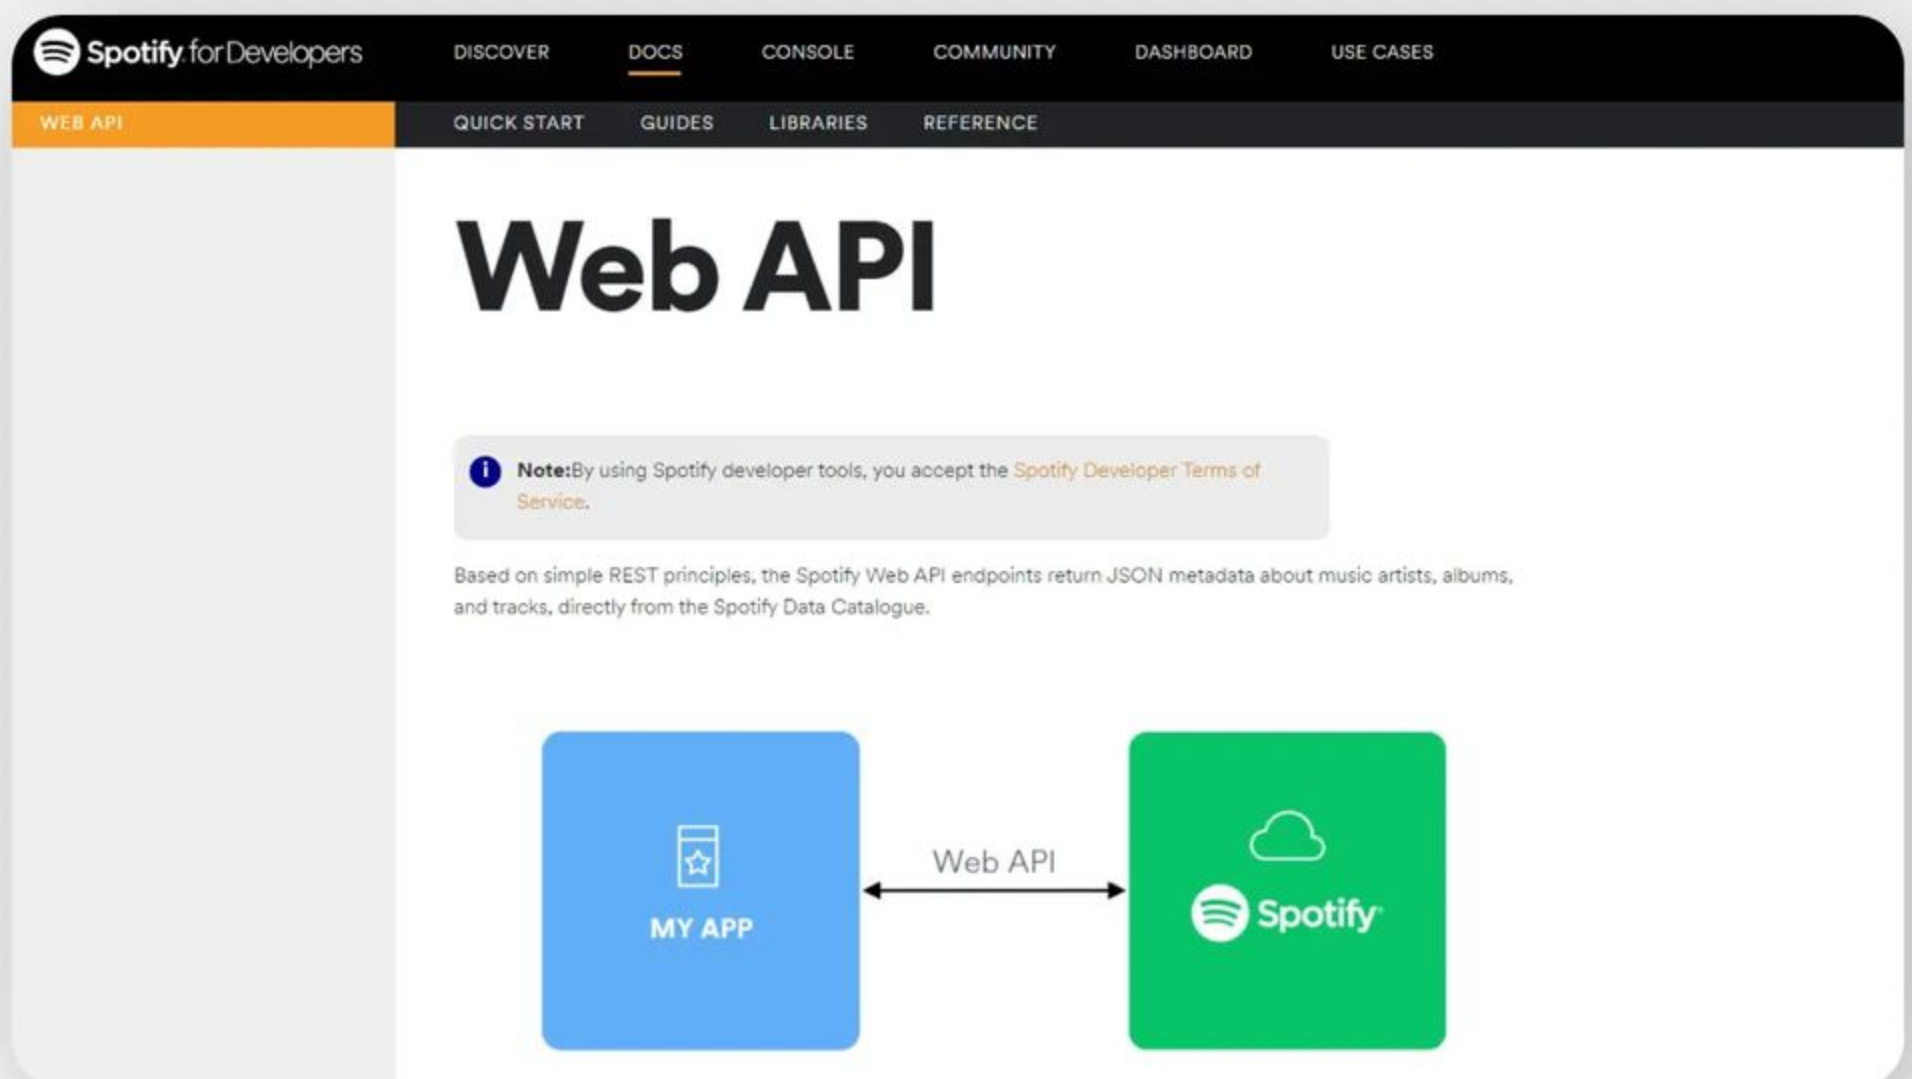

We understand "nut free" muffins can't contain pecans (even if the recipe doesn't mention "nuts" anywhere!) and we automatically determine that a recipe with Worcestershire sauce isn't vegetarian (we're looking at you, anchovies.)

SWIPE <<<

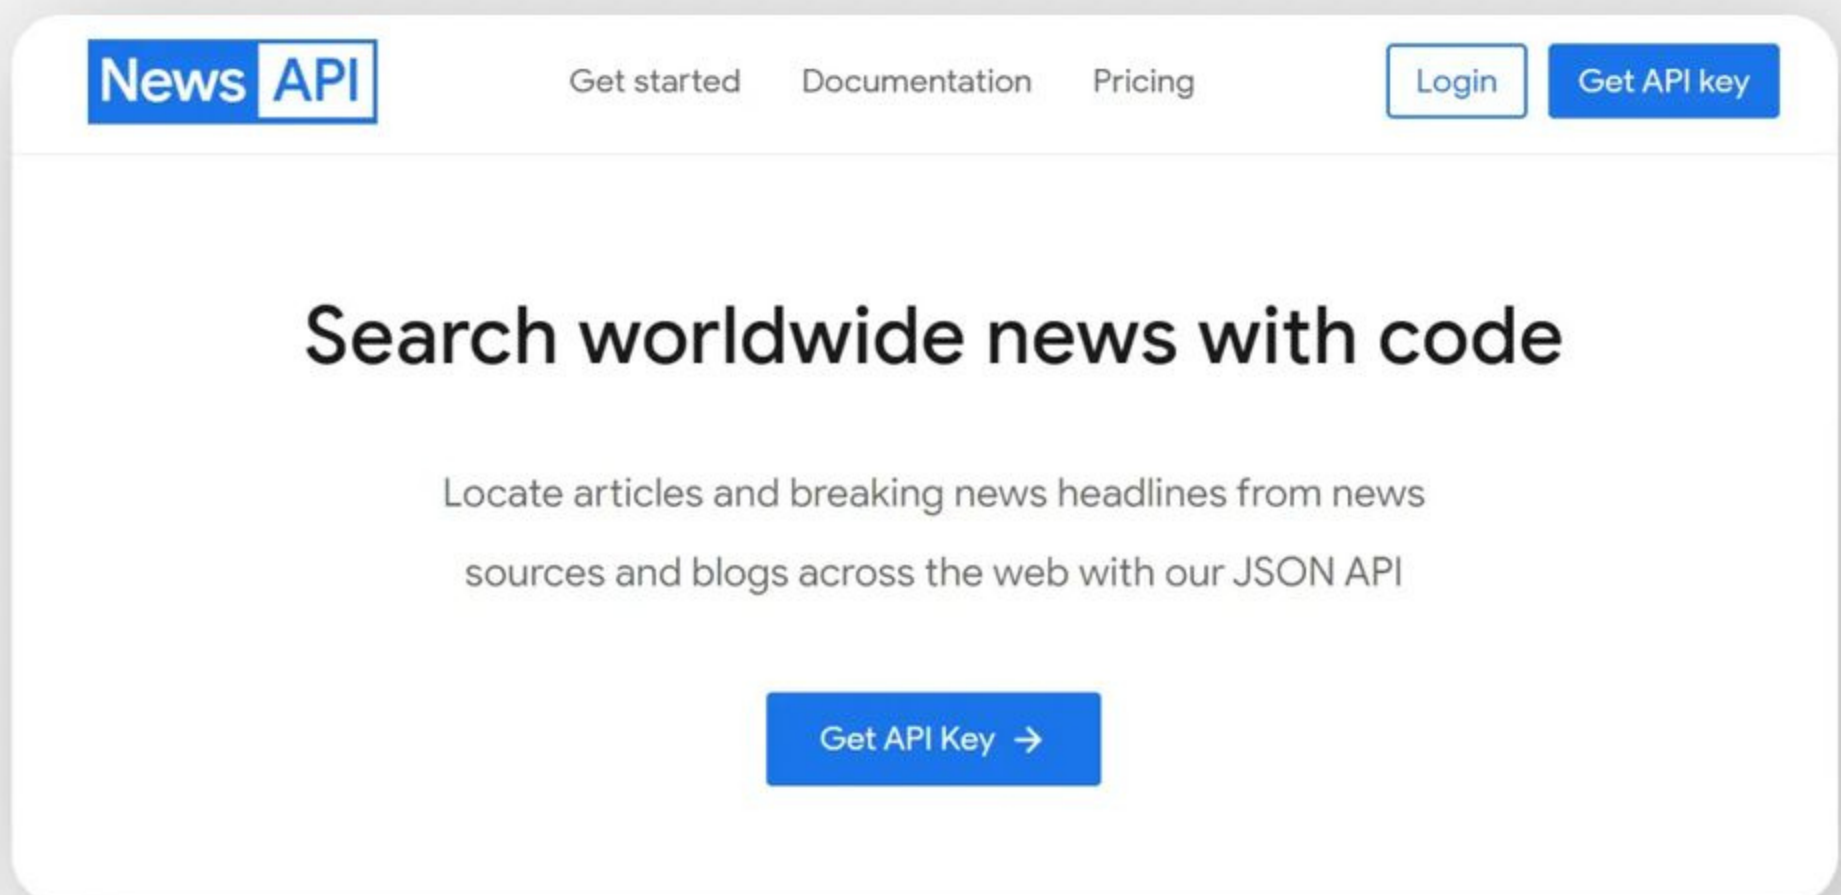

# Spotify API

Spotify's web API allows you to query data about music artists, albums, and tracks, directly from the Spotify Data Catalogue.

# News API

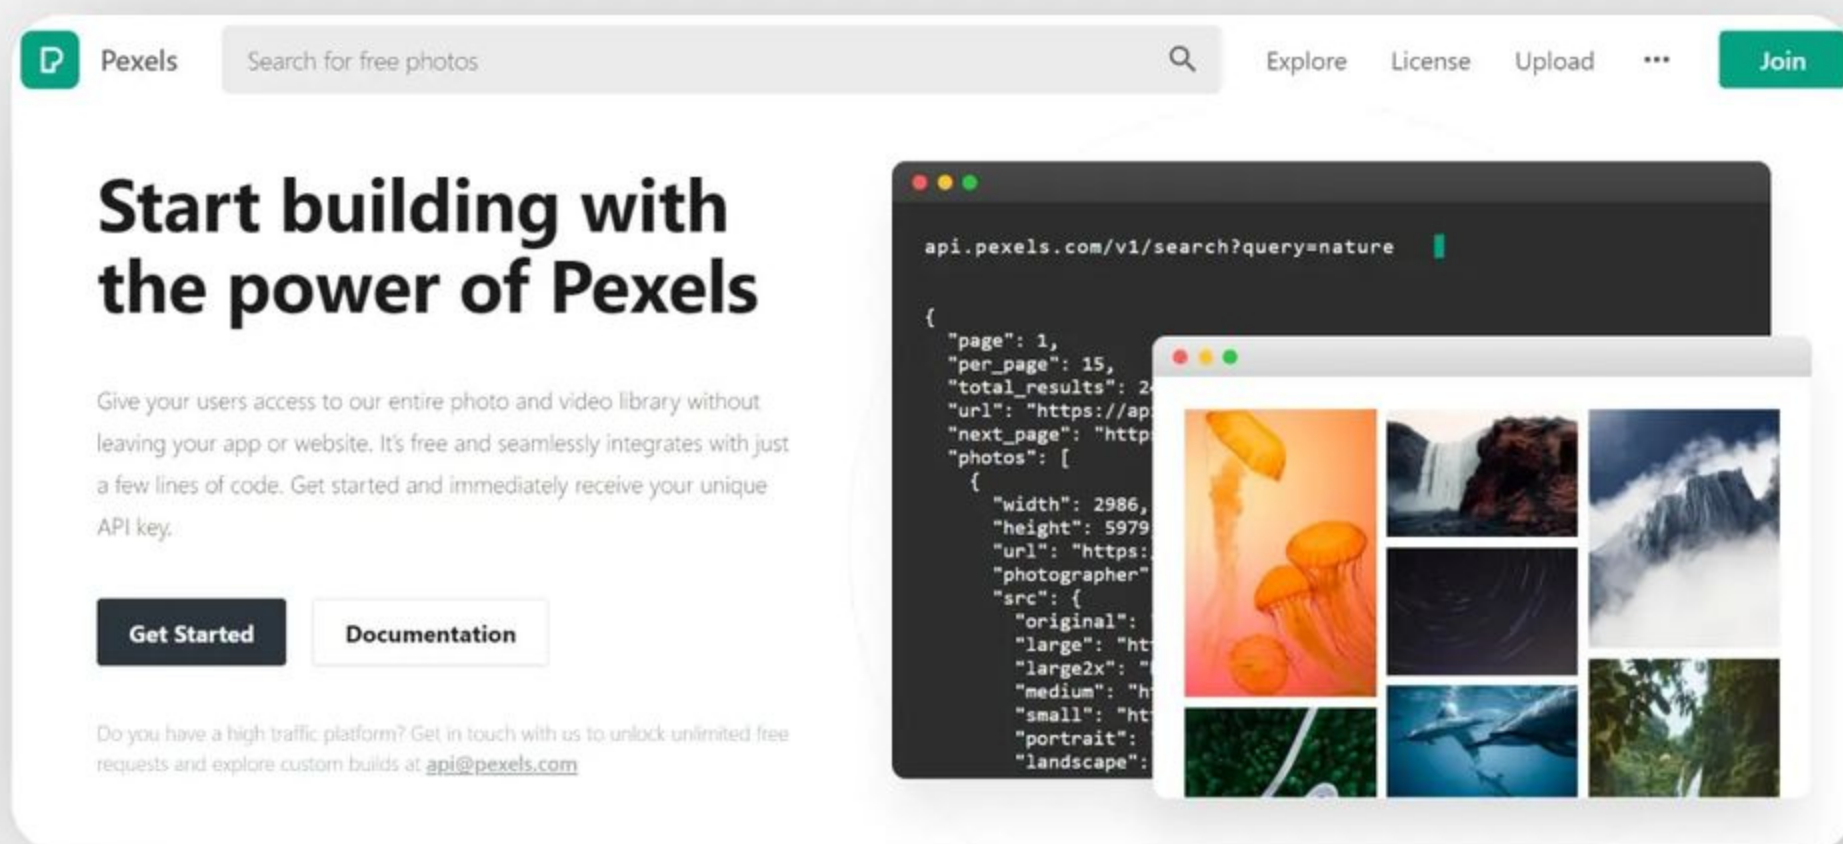

Get and search for news from over 30,000 publications with this simple and free (for non commercial projects)

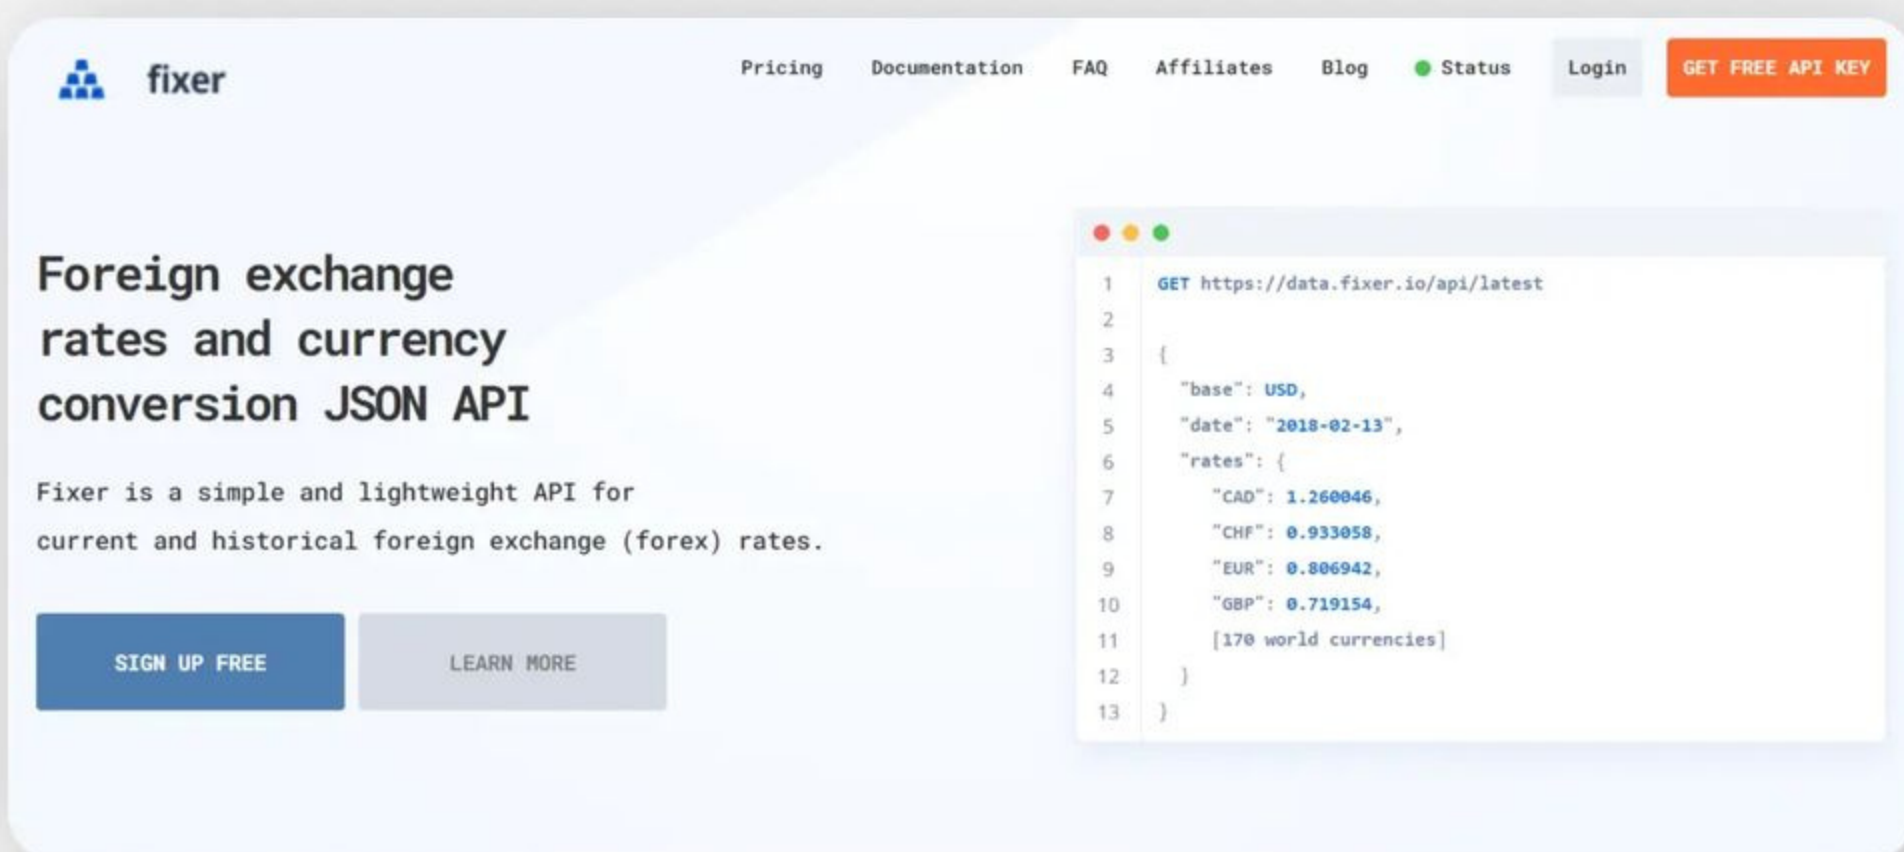

# Pexels API

Integrate thousands of world-class free photos and videos directly into your product.

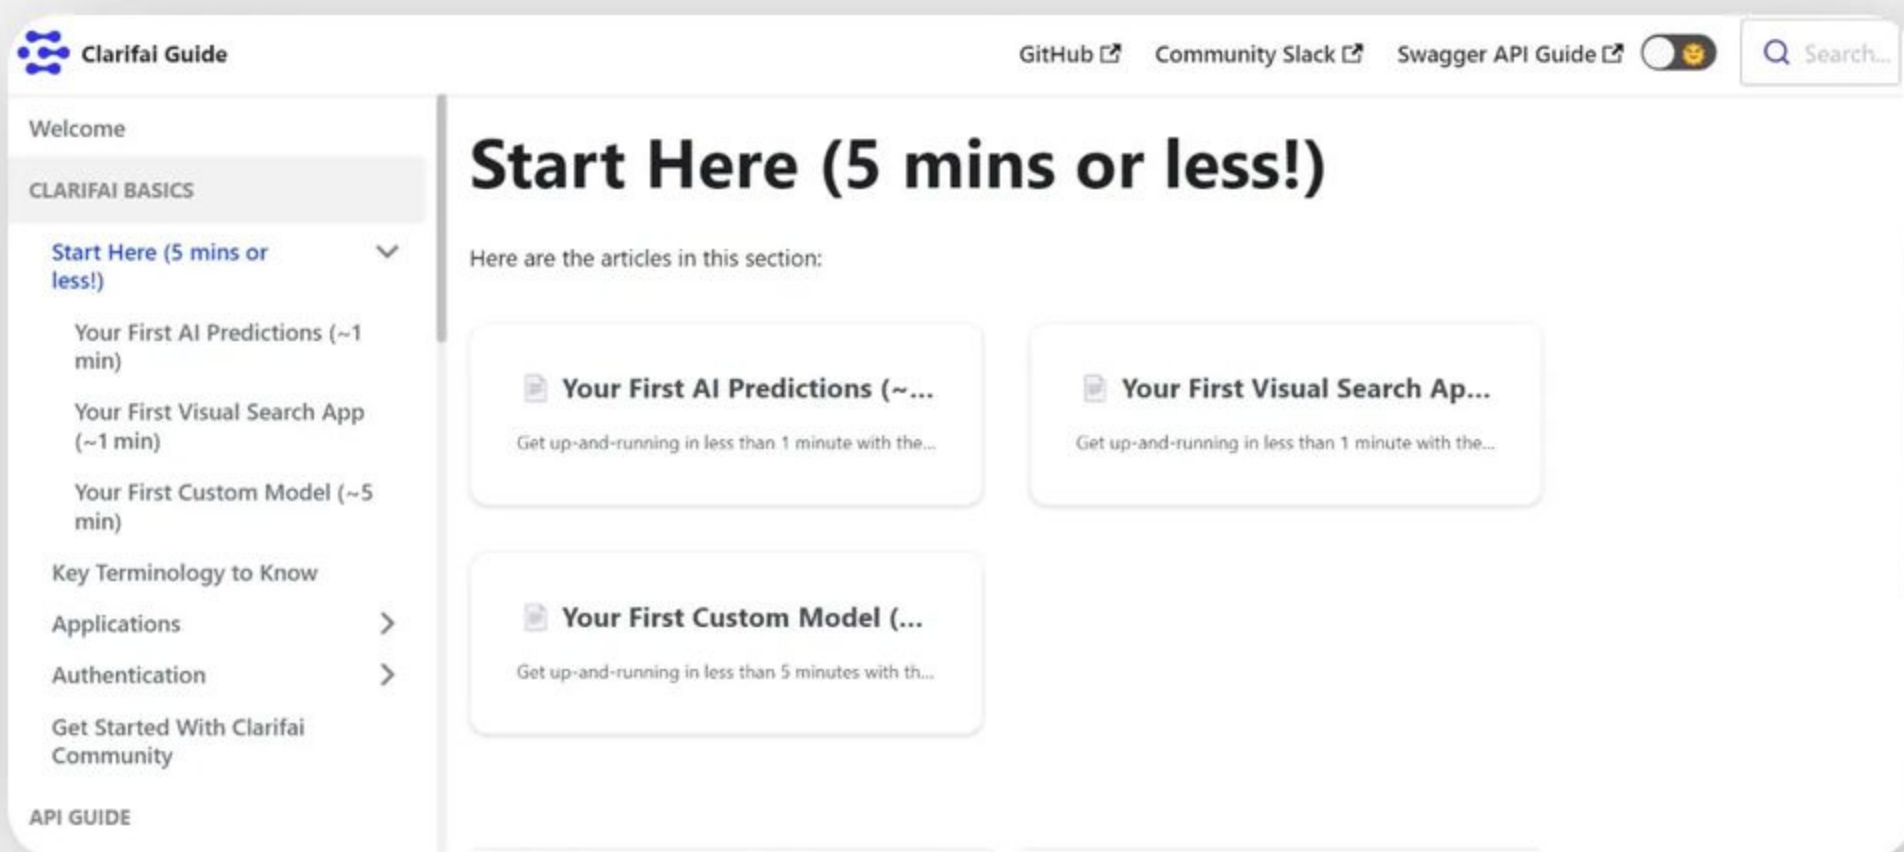

# Fixer API

Fixer is a lightweight and simple API for historical and current foreign exchange rates.

# Clarifai API

This API can recognize over 11,000 concepts like dogs, cats, etc. This technology is fantastic, and I can imagine so many different side projects you could create with this

***Bonus***

## **Quickchart API**

quickly add bar graphs, pie graphs, and more to your next side project

## **Coinbase API**

You can use their API to check the price of cryptocurrency, to buy it, and more

## **Cloud Natural Language API**

Google's Cloud Natural Language API is one of many APIs in Google's Machine Learning API family
